

**CD4069**

CMOS IC

INVERTER CIRCUITS

■ DESCRIPTION

The UTC **CD4069** consists of six inverter circuits and is manufactured using complementary MOS (CMOS) to achieve wide power supply operating range, low power consumption, high noise immunity, and symmetric controlled rise and fall times.

All inputs are protected from damage due to static discharge by diode clamps to VDD and VSS.

■ FEATURES

- * Wide supply voltage range: 3.0V ~ 15V.
- * High noise immunity: 0.45 V_{DD} typ.
- * Low Power TTL compatibility: Fan out of 2 driving 74L or 1 driving 74LS.
